

Dowling Road / Seward Highway Interchange Reconstruction

Project Number CFHWY00359

FACT SHEET

Current Status

After taking into consideration public comments, engineering analysis and traffic data, the Alaska Department of Transportation & Public Facilities has determined that the best reconstruction of the Dowling/Seward Highway interchange is larger roundabouts with a new bridge (see figure below). There will be additional opportunities to comment as design progresses. Construction is expected to begin in 2020. View all the alternatives considered in the Preliminary Engineering Report posted on the project website at: <http://dowlingsewardinterchange.com/>.

Project Description

This project will completely reconstruct the Dowling Road/Seward Highway interchange. Project goals include improving safety, serving all motorized and nonmotorized travelers, be cost effective, and be easy to maintain. The reconstructed interchange will accommodate projected traffic through 2040.

Schedule

Preliminary engineering, environmental, and design efforts will continue through 2019 with construction anticipated to begin in 2020.
